WORM INFECTION IS EASY TO CONTROL

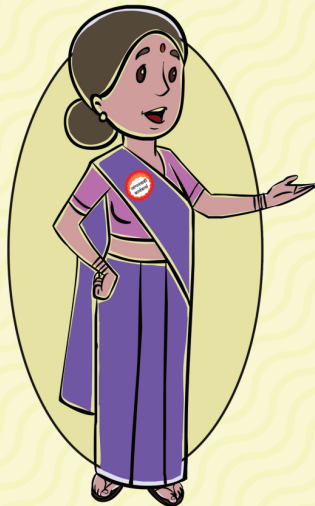

Keep your nails clean and short.

Keep your surroundings clean.

Always drink clean water.

Wear shoes.

Keep food covered.

Do not defecate in the open. Always use a toilet.

Wash fruits and vegetables with clean water.

Wash your hands with soap, especially before eating and after using the toilet.

WORM TRANSMISSION CYCLE

1

An infected child contaminates soil with faeces containing worm eggs. These eggs develop into larvae in the soil.

3

In an infected child, eggs and larvae develop into adult worms, which produce eggs and have an ill effect on the child's health.

2

Other children are infected by eggs ingested through food or dirty hands, or by larvae penetrating the skin.
